

CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

What is claimed is:

1. (currently amended) A massage protrusion for use in a massage pad structure, the massage pad structure having a chamber accessible through an opening on a top surface thereof ~~of the massage pad structure~~, the massage protrusion comprising:

a hemispherical top movably disposed on, ~~the top surface and~~ tiltable with respect to, the top surface; and,

a root section coupled to the hemispherical top through the opening and movably disposed in and limited by the chamber.

2. (original) The massage protrusion of claim 1, wherein each massage protrusion further comprises a connecting pillar that extends downward from the hemispherical top and couples to the root section.

3. (currently amended) The massage protrusion of claim 2 ~~1~~, wherein the root section comprises a hemispherical bottom coupled to the connecting pillar, the hemispherical bottom having a diameter greater than the diameter of the opening.

Amendment Dated June 27, 2006

-3-

Appl. No. 10/632,336
Atty. Docket No. 64182-5001

4072691v1

4. (original) The massage protrusion of claim 1, wherein the root section comprises a hemispherical bottom coupled to the connecting pillar, the hemispherical bottom having an arresting ring disposed at a bottom portion of the connecting pillar.

5. (currently amended) The massage protrusion of claim 4, wherein the arresting ring has ~~having~~ an outside diameter greater than the diameter of the opening.

6. (original) The massage protrusion of claim 1, further comprising an elastic tension member displaced in the chamber and supporting the root section.

7. (original) The massage protrusion of claim 1, wherein the root section has a spherical shape coupled to the hemispherical top through a neck section.

8. (original) The massage protrusion of claim 1, wherein the root section has a water-drop shape with a tapered portion coupled to the hemispherical top through a neck section.

9. (original) The massage protrusion of claim 1, wherein the hemispherical top has a magnetic member embedded therein.

Amendment Dated June 27, 2006

Appl. No. 10/632,336
Atty. Docket No. 64182-5001

4072691v1

10. (original) The massage protrusion of claim 1, wherein the hemispherical top is made of a ceramic material.

11. (original) The massage protrusion of claim 1, wherein the hemispherical top is coated with a far infrared converting material.

12. (original) The massage protrusion of claim 1, wherein the hemispherical top of the massage protrusion includes a groove.

13. (original) The massage protrusion of claim 1, wherein the hemispherical top of the massage protrusion includes an opening on a top surface.

14. (Currently amended) A massage pad structure comprising:
a mat having a plurality of through holes;
a pad plate;
a middle layer sandwiched between the mat and the pad plate and having a plurality of chambers, each of the plurality of chambers accessible through a through hole of the plurality of through holes;

a plurality of massage protrusions, each massage protrusion having:

a hemispherical top movably disposed on the mat,
and tiltable with respect to the mat;

a root section coupled to the hemispherical top through the through hole and movably disposed in and limited by a chamber of the plurality of chambers.

15. (original) The massage pad structure of claim 14, wherein each massage protrusion further comprises a connecting pillar that extends downward from the hemispherical top, passes through the through hole and couples to the root section.

16. (currently amended) The massage pad structure of claim 15 14, wherein the root section comprises a hemispherical bottom coupled to the connecting pillar, the hemispherical bottom having a diameter greater than the diameter of the through hole.

17. (original) The massage pad structure of claim 14, wherein the root section comprises a hemispherical bottom coupled to the connecting pillar, the hemispherical bottom having an arresting ring disposed at a bottom portion of the connecting pillar.

Amendment Dated June 27, 2006

Appl. No. 10/632,336
Atty. Docket No. 64182-5001

4072691v1

18. (currently amended) The massage pad structure of claim 17, wherein the arresting ring has ~~having~~ an outside diameter greater than the diameter of the through hole.

19. (original) The massage pad structure of claim 14, further comprising an elastic tension member displaced in the chamber and supporting the root section.

20. (original) The massage pad structure of claim 14, wherein the root section has a shape selected from the collection of a water-drop shape and a spherical shape, with its upper section coupled to the hemispherical top through a neck section.

21. (original) The massage pad structure of claim 14, wherein the hemispherical top has a magnetic member embedded therein.

22. (original) The massage pad structure of claim 14, wherein the hemispherical top is made of a ceramic material.

23. (original) The massage pad structure of claim 14, wherein the hemispherical top is coated with a far infrared converting material.

Amendment Dated June 27, 2006

Appl. No. 10/632,336
Atty. Docket No. 64182-5001

4072691v1

24. (original) The massage pad structure of claim 14, further comprising a dirt isolating layer covering the plurality of massage protrusions.

25. (original) The massage pad structure of claim 14, wherein the pad plate includes an attachment layer disposed on a lower surface.

26. (original) The massage pad structure of claim 14, wherein the hemispherical top of the massage protrusion includes a groove.

27. (original) The massage pad structure of claim 14, wherein the hemispherical top of the massage protrusion includes an opening on a top surface.

28. (currently amended) A method comprising the steps of:
providing a massage pad structure comprising a top surface with at least one opening for accessing a chamber in the massage pad structure; and,
inserting a massage protrusion into the chamber through the opening, the massage protrusion having a top portion being

movably disposed on the top surface and further having a bottom portion being retained in the chamber; and
tilting the massage protrusion with respect to the top surface.

29. (New) The massage protrusion of claim 2 wherein the hemispherical top has a diameter greater than the diameter of the connecting pillar.

30. (New) The massage protrusion of claim 2 wherein the connecting pillar has a diameter that is smaller than the diameter of the opening such that the hemispherical top can be tilted with respect to the top surface.
